Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/ChrX
                                                                                                                                                                                                                                        one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. RP11-258C19 is from the library RPCI-11.1 constructed by the group of Pieter de Jong.
                                                                                                                                                                                                                                                                                                    This sequence is the entire insert of clone RP11-258c19 This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cambridgeshire, CB10 1SA, UK. On Mar 1, 2002 this sequence version replaced 9::10862725.
During sequence assembly data is compared from overlapping clones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

**NOTE: This is a 'working draft' sequence. It currently
consists of 6 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.

SUBCELLULAR LOCATION: Integral membrane protein.
SUBCELLULAR LOCATION: Integral membrane protein.
LOCALIZED IN ENDOSOMAL VESICLE MEMBRANE (PROBABLE).
DOMAIN: CONTAINS A HISTIDINE-RICH REGION WHICH IS A LIGAND ZINC AND AN ASPARTIC ACID-RICH REGION WHICH IS A POTENTIAL
   FOR ZINC (BY SIMILARITY).

SIMILARITY: BELONGS TO THE CATION DIFFUSION FACILITATOR TRANSPORTERS (CDF, TC 2.A.4). SLC30A SUBBAMILY.
  Genet. 17:292-297(1997).
FUNCTION: PROBABLY INVOLVED IN ZINC TRANSPORT OUT OF THE
   European Bioinformatics Institute.

The FUNCTION: Involved in zinc efflux across the cytoplasmic membrane, thus reducing zinc accumulation in the cytoplasm and rendering bacteria more resistant to zinc. It may contribute to zinc homeostasis at low concentrations of zinc (By similarity).

TO SUBCELLULAR LOCATION: Integral membrane protein (Potential).

TRANSPORTERS (CDF, TC 2.A.4). SLC30A SUBFAMILY.

  Genomics 35:486-493(1996).

Genomics 35:486-493(1996).

FUNCTION: ELECTRICALLY SILENT TRANSPORTER SYSTEM WHICH IS A MEDIATOR OF SODIUM AND CHLORIDE REABSORPTION.

SUBCELLULAR LOCATION: Integral membrane protein.

TISSUE SPECIFICITY: PREDOMINANT IN KIDNEY.

IN TISSUE SPECIFICITY: PREDOMINANT IN KIDNEY.

IN SECULOR AND THE CAUSE OF GITELMAN'S SYNDROME.

GIS), AN AUTOSOMAL RECESSIVE DISEASE CHARACTERIZED BY DIVERSE ABNORMALITIES IN ELECTROLYTE HOMEOSTASIS INCLIDING HYPOKALAEMIC METABOLIC ALKALOSIS. GS IS A SUBSET OF BARTTER'S SYNDROME.

SYMILARITY: BELONGS TO THE SLC12A FAMILY OF TRANSPORTERS.
  SEQUENCE FROM N.A., AND VARIANTS GS.

   related to the zinc transporter subfamily. Polynucleotides and polypeptides of the invention are useful for treating a disease or condition mediated by human transporter protein. The proteins also provide a target for diagnosing a disease or predisposition to disease mediated by the peptide, and in pharmacogenomic analysis. The peptides are also useful for treating a disorders characterised by absence of, inappropriate or unwanted expression of the protein. The nucleic acids are also useful in drug screening assays and as a target for treatment by the compounds identified through drug screening. The invention also provides vectors for gene therapy in patients with aberrant expression of the gene encoding the transporter protein. The gene of the invention has been found to be expressed in humans in the kidney, testis, heart, placenta, small intestine and liver. The gene has been localised to human chromosome 1. The current sequence represents the human transporter
  Novel human transporter proteins, related to zinc transporter subfamily, useful as model for developing human therapeutic targets serves as target for human therapeutics -

appetite, thermoregulation, pain, perception, manner or other disorders thermoregulation, pain, perception, mount of the disorders or other disorders related to cell signal processing and metabolic pathway modulation, gastrointestinal diseases, respiratory disorders, blood disorders, hepatitis, trauma, regeneration, viral, bacterial or parasitic infections, hyper- or hypo-thyroidism, endometriosis, fertility, infections, hyper- or hypo-thyroidism, haemolytic anaemia, Werner infections.
  infectious disease, anorexia, cancer, neurodegenerative disorders (e.g. Alzheimer's disease, Parkinson's disease, Huntington's disease, multiple sclerosis and amyotropic lateral sclerosis), acute brain injury (e.g. stroke, head injury and cerebral palsy), central nervous system disorders (e.g. depression, epilepsy and schizophrenia), lung disorders, reproductive disorders disorders affecting carbohydrate metabolism (e.g. galactosaemia and hereditary fructose intolerance), tissue disorders (e.g. Wiskott-aldrich syndrome, thrombocytopaenia, night blindness and pick's disease), disorders linked to abnormal angiogenesis, asthma, azoospermia, learning disabilities, facial dysmorphism, autoimmune encephalomyelitis, X-linked severe combined immunodeficiency, seizures, migraines, inflammation, autoimmune disorders, disorders affecting sleep, appetite, thermoregulation, pain, perception, hormone secretion and serval heavyour.
   The invention relates to an isolated NOVX polypeptide selected from NOV1a, NOV1a, NOV1ac, NOV2a, NOV2c, NOV3a, NOV3b, NOV4a, NOV4b, NOV5a, NOV5b or NOV6-NOV9 polypeptides, their mature form or variant. Also included are a nucleic acid encoding a NOVX protein or variant; a vector comprising the nucleic acid; a cell comprising the vector; an anti-NOVX antibody; and identifying agents that modulate the expression or activity of NOVX. NOVX, the nucleic acid, antibody and modulators are useful in the diagnosis, treatment or prevention of developmental disorders, endocrine disorders, vascular disorders,
   hypertension, arteriosclerosis, ischaemia, haemolytic anaemia, Werner syndrome, rheumatoid arthritis, Grave's disease, wound healing, X-linked mental retardation, psychotic and neurological disorders and neuronal
   Claim 1; Page 20; 210pp; English
  polypeptides, useful for treating cancers and tumours, lung disorders, haematopoietic disorders, autoimmune diseases and immune disorders
  degeneration. The present sequence represents a NOVX protein

30-NOV-2000;
   This invention relates to the DNA and protein sequences of novel isolated 47476, 67210, 49875, 46842, 33201, 83378, 84233, 64708, 85041 or 84234 proteins. The method of the invention is useful for treating a disorder characterised by aberrant activity of 47476, 67210, 49875, 46842, 33201, 83378, 84233, 64708, 85041 or 84234-expressing cell in a subject. The protein molecules can act as novel diagnostic targets and therapeutic agents for controlling aberrant or deficient signal the protein molecules.
  Isolated 47476, 67210, 49875, 46842, 33201, 83378, 84233, 64708, 8 or 84234 polypeptides, useful as reagents or targets for treating diagnosing pain or metabolic, liver, kidney, or cardiovascular

   The invention relates to human pancreatic tumour polypeptides and nucleic acid molecules encoding such polypeptides. The invention also relates to compositions and methods for the diagnosis, prevention and therapy of cancer, particularly pancreatic cancer. Sequences of the invention are used in gene therapy and in vaccines. The present sequence is human pancreatic tumour full-length protein.

   organisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing and treating prostate cancer in mammals. The prostate cancer-associated genes are useful for diagnosing or treating prostate cancer, as well as for identifying modulators of prostate cancer or agents that inhibit prostate cancer. The nucleic acid sequences are particularly useful in gene therapy, as a vaccine or in antisense applications.

ABG61800-ABG61944 represent prostate cancer-associated proteins.
   cancer-associated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with prostate cancer-associated polynucleotides (designated PC genes) that selectively hybridise to a sequence that is at least 80% identical to them. The prostate cancer-associated polynucleotide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various
  Detecting a prostate cancer-associated transcript in a cell in a patient, useful for diagnosing prostate cancer (PC) or screening modulators of PC, by determining if prostate cancer-associated gare expressed in a prostate tissue -

  The invention relates to prostate specific proteins (PSP) and prostate specific nucleic acids (PSNA). Sequences of the invention are useful for identifying, diagnosing, monitoring, staging, imaging and treating prostate cancer and non-cancerous disease states in prostate. They are also useful for producing engineered prostate tissue for treatment and research. The PSNA sequences are used in gene therapy and for producing transgenic animals and cells. The invention is also used as vaccines. The present sequence is human prostate specific protein of the invention.

   The invention relates to heavy metal (e.g. arsenite and zinc) transporter polypeptides and polynucleotides. The polypeptides of the invention are useful for producing antibodies that are useful for screening cDNA expression libraries to isolate full length clones of interest. The antibodies are also useful for detecting the polypeptides in situ, in cells or in vitro, in cell extracts. Nucleic acid molecules of the invention are useful for producing transgenic plants with altered tolerance to heavy metals. They are also useful as probes for genetically and physically mapping the genes that are a part of, and as markers for traits linked to thos genes. The present sequence is soybean zinc transporter (ZnT-2) protein

  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventiuseful in developmental biology and in elucidating cell signalling a cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG16-ABL3611), expressed DNA sequences (ABLIG180-ABL16175) and the encoded proteins (ABB7037-ABB72072).

   This invention relates to the DNA and protein sequences of novel isolated 47476, 67210, 49875, 46842, 33201, 83378, 84233, 64708, 85041 or 84234 proteins. The method of the invention is useful for treating a disorder characterised by aberrant activity of 47476, 67210, 49875, 46842, 33201, 83378, 84233, 64708, 85041 or 84234-expressing cell in a subject. The protein molecules can act as novel diagnostic targets and therapeutic agents for controlling aberrant or deficient signal transduction resulting aberrant or deficient signal.
  transduction resulting, in e.g., haematopositic disorders, including blood clotting disorders, autoimmune disorders, or disorders related to an inability to clear infections (e.g., viral or bacterial infections), as well as disorders related to abnormal cellular proliferation or as well as disorders related to abnormal cellular proliferation or
  Isolated 47476, 67210, 49875, 46842, 33201, 83378, 84233, 64708, 8 or 84234 polypeptides, useful as reagents or targets for treating diagnosing pain or metabolic, liver, kidney, or cardiovascular disorders

   The present invention provides the protein and coding sequences of human ORFX, where X is any number between 1 and 132. These sequences can be used to diagnose and treat ORFX related disorders, including cancer, hyperproliferative and dysproliferative disorders, neurodegenerative disorders, disorders related to organ transplantation or cardiovascular
  immunomodulatory, haematopoiesis regulating, tissue growth, inhib activin, chemotactic or chemokinetic, haemostatic or thrombolytic antiinflammatory activities. The present sequence is one or antion of the contraction of t

  The present invention relates to the genome sequence of Listeria monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L. monocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein encoded by the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and for biosynthesis and biodegradation, especially biosynthesis of vitamin B12. The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes: related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by L.

   ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.

N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the

  This sequence is encoded by the OSR gene from S. cerevisiae strain DKD-SD-H. The recombinant yeast containing the OSR DNA sequence was used in the preparation of glutathione by peroxide resistant microbes. Glutathione produced by the recombinants is secreted in to the culture medium and collected. It is useful in drugs and foodstuffs.
   Prodn. of glutathione using peroxidase resistant yeast - useful in the manufacture of drugs and foodstuffs

   The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the

   AAF67743 to AAF68080 encode the Corynebacterium glutamicum membrane construction and membrane transport (MCT) proteins given in AAB76510 to AAB76847. The MCT nucleic acids and proteins are useful in the identification of microorganisms which can be used to produce fine chemicals, for modulating fine chemical production in C. glutamicum or related bacteria (e.g. Brevibacterium lactofermentum), the typing or identification of C. glutamicum or related bacteria, as reference points for mapping C. glutamicum genome, and as markers for transformation. AAF68082 and AAF68082 represent sequencing primers which are used in an example from the present invention.
   Corynebacterium glutamicum nucleic acids encoding membrane construction and membrane transport proteins or their portions, useful for typing or identifying C. glutamicum or related bacteria, and as markers for transformation -

   The present sequence represents a human transporter protein. The protein is similar to zinc transporter and vesicular transporter proteins. The transporter proteins and their polynucleotides, as well as antibodies specific for the proteins may be used for the detection of mutant proteins or inappropriately expressed proteins for the diagnosis of disease. In addition they may be used to screen for drugs and as
  Novel polynucleotides useful for detection inappropriately expressed proteins for the screening, and therapeutics -
